Develop

Transition to Design Engineer

- 
-  discovery & ideation
 -  wireframes & hi-fi mockups
 -  translate hi-fi mockups to
fully functional code
 -  design & code QA
 -  crafting reusable SCSS
 -  creating & maintaining a
design system
 -  angular, design & UX
documentation & flows
 -  researching, implementing tools
to improve the UI & boost dev
efficiency

With UX Designer & Front-End Team Lead Attributes

- mentoring & educating front-end devs
- guiding & assisting front-end devs,
gathering information they need to succeed
- UX flows, personas, compliance with NNG, IDF & other industry experts
- key figure in discussions around the product and especially the user

BIG WINS

Establishing ProRank's Style

Pre-MVP

When I started, ProRank's UI was out-of-the box Material Design, with some minor overrides. Everything was grayscale except the nav and logo. The team did not have a Figma subscription nor did they have any mockups, style documents and UI components.

MVP

I was the sole designer for MVP. It was my responsibility to design all wireframes and hi-fi mockups and implement multiple rounds of changes. In this process, I established the first iteration of ProRank's style, which was a major improvement, well-received by the board.

Post-MVP

UI demands increased and it became a necessity to have a central location to store common UI elements. I took on the gargantuan and ever-evolving task of creating & maintaining ProRank UI Style Library in Figma. This file grew from 0 components to 194 components. In tandem, I created ProRank's color palette and established explicit color, typography, sizing, spacing, and border rules, which are documented in Figma.

The screenshot shows the Figma application interface for a 'Style Guides & Libraries / ProRank UI Library'. The left sidebar lists components: Base UI, Buttons, Cards, Chips, Flags, Icons, Inputs, Graphics, Logos, Modals & Alerting, Tabs & Pagination, and status stickies. Each component has a lock icon next to it. The main canvas displays several cards representing different UI elements, each with an update date and a preview image. A large card for 'status stickies' is expanded, showing a grid of four smaller cards: 'Base UI' (updated June 2024), 'Buttons' (updated 09/27/24), 'Icons' (updated 09/10/24), and 'Inputs' (updated 09/26/24). Below these are cards for 'Chips' (updated 08/08/24), 'Flags' (updated 08/05/24), and 'Graphics' (updated 09/09/24). To the right, a vertical sidebar shows 'Design' and 'Prototype' tabs, a 'Page' section with a color palette (1E1E1E) and 100% zoom, 'Local variables' (empty), 'Local styles' (Text styles: Ag Roboto 16 · 16/Auto, Ag Roboto 14 · 14/Auto, Ag Roboto 18 · 18/Auto, Ag Roboto 12 · 12/Auto), and 'Color styles' (Primary, Primary 200, Primary 50, Secondary, Secondary 200, Secondary 50, Green 800, Green 500, Green 200, Blue 700, Blue 300, Blue 100, Purple 500, Purple 300).

CODE QUALITY

code quality // eslint.config.js

```
{  
  "editor.tabSize": 2,  
  "editor.formatOnSave": true,  
  "editor.indentSize": "tabSize",  
  "editor.wordSeparators": "\u0009~!@#$%^&*()=-+[{}]\\";:\'\",.</?>?  
  "eslint.validate": ["javascript", "typescript", "html"],  
  "html.format.wrapAttributes": "preserve-aligned",  
  
  "editor.defaultFormatter": "esbenp.prettier-vscode",  
  "[html)": {  
    "editor.defaultFormatter": "esbenp.prettier-vscode"  
  },  
  "[scss)": {  
    "editor.defaultFormatter": "esbenp.prettier-vscode"  
  }  
}
```

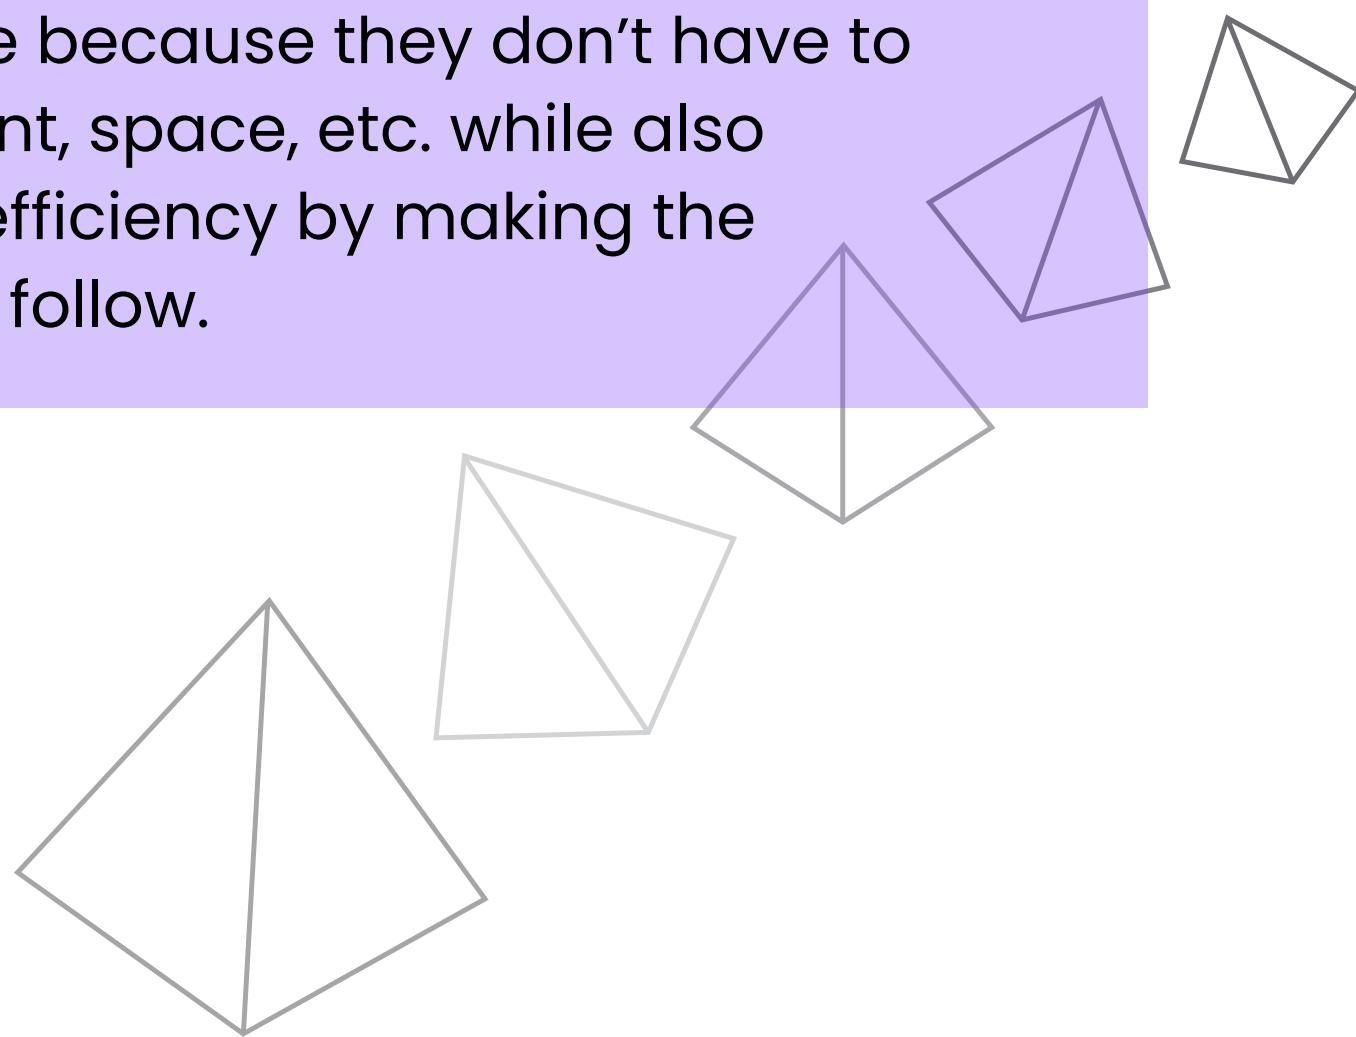

When additional devs were introduced to the Angular codebase, I saw a need for a fine-tuned linter to ensure and enforce consistent, formatted, “clean” code.

Linters automatically apply formatting to the file once the dev saves it. This saves the developer time because they don’t have to manually indent, space, etc. while also boosting dev efficiency by making the code easier to follow.

Prioritizing clean code does not slow down development; in fact, it accelerates it.

RAJA NAGENDRA KUMAR CODE DOCTOR AND FORMER CTO, TEJASOFT INNOVATIONS

code quality // enum.ts

As the depth of api responses increased, I saw a need for a global enum file that allows devs to access the variables inside the response without hard-coding them.

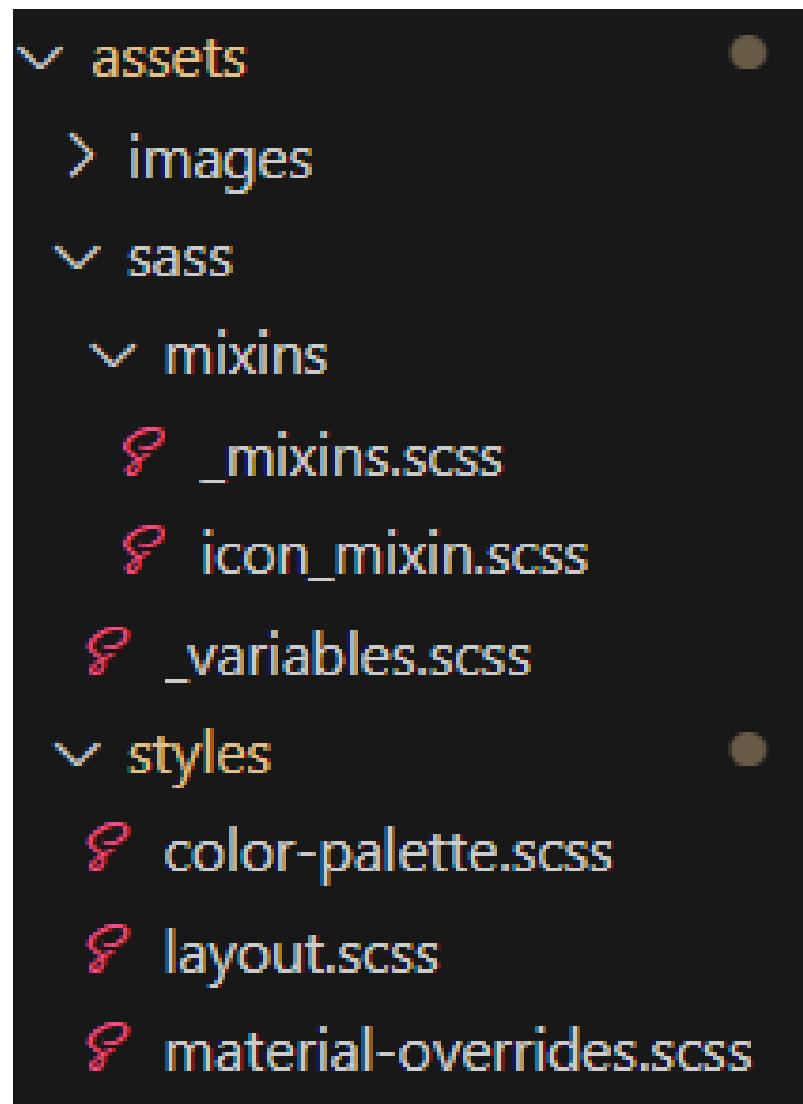

This allows devs to make a single change in one file instead of having to find and update every line of code where the variable is accessed.

```
8  // jobPosting/allRules
9  export enum SearchCriteriaRuleIds {
10    careerLevel = 1005,
11    roles = 1001,
12    companies = 1010,
13    yearsOfXp = 1020,
14    industries = 1030,
15    location = 2000,
16    workStatus = 2020,
17    positionTypes = 2030,
18    skills = 3000,
19    certifications = 4000,
20    education = 4001,
```

As the application's complexity increases, maintaining hard-coded values becomes increasingly challenging, leading to a higher likelihood of errors and inconsistencies.

code quality // leveraging Sass

```
_variables.scss ▾
src > assets > sass > _variables.scss > ...
1  /* Bootstrap palette overrides */
2  $primary: #3f51b5;
3  $secondary: #8bc34a;
4  $warn: #dc3545;
5  $border-color: #bdbdbd; // material gray
6
7  /* GRAY TONES */
8  // mat-background-gray-{{hue here}}, mat-
9
10 // input background color, application ba
11 $matGray50: #fafafa;
12
13 // hover and highlight gray
14 $matGray100: #f5f5f5;
15
16 // expansion panel body bkgd
17 $matGray200: #f2f2f2;
18
19 // disabled input bkgd
20 $matGray300: #e0e0e0;
21
22 $matGray400: #bdbdbd;
23
24 // disabled button text, gray icons, hint
```

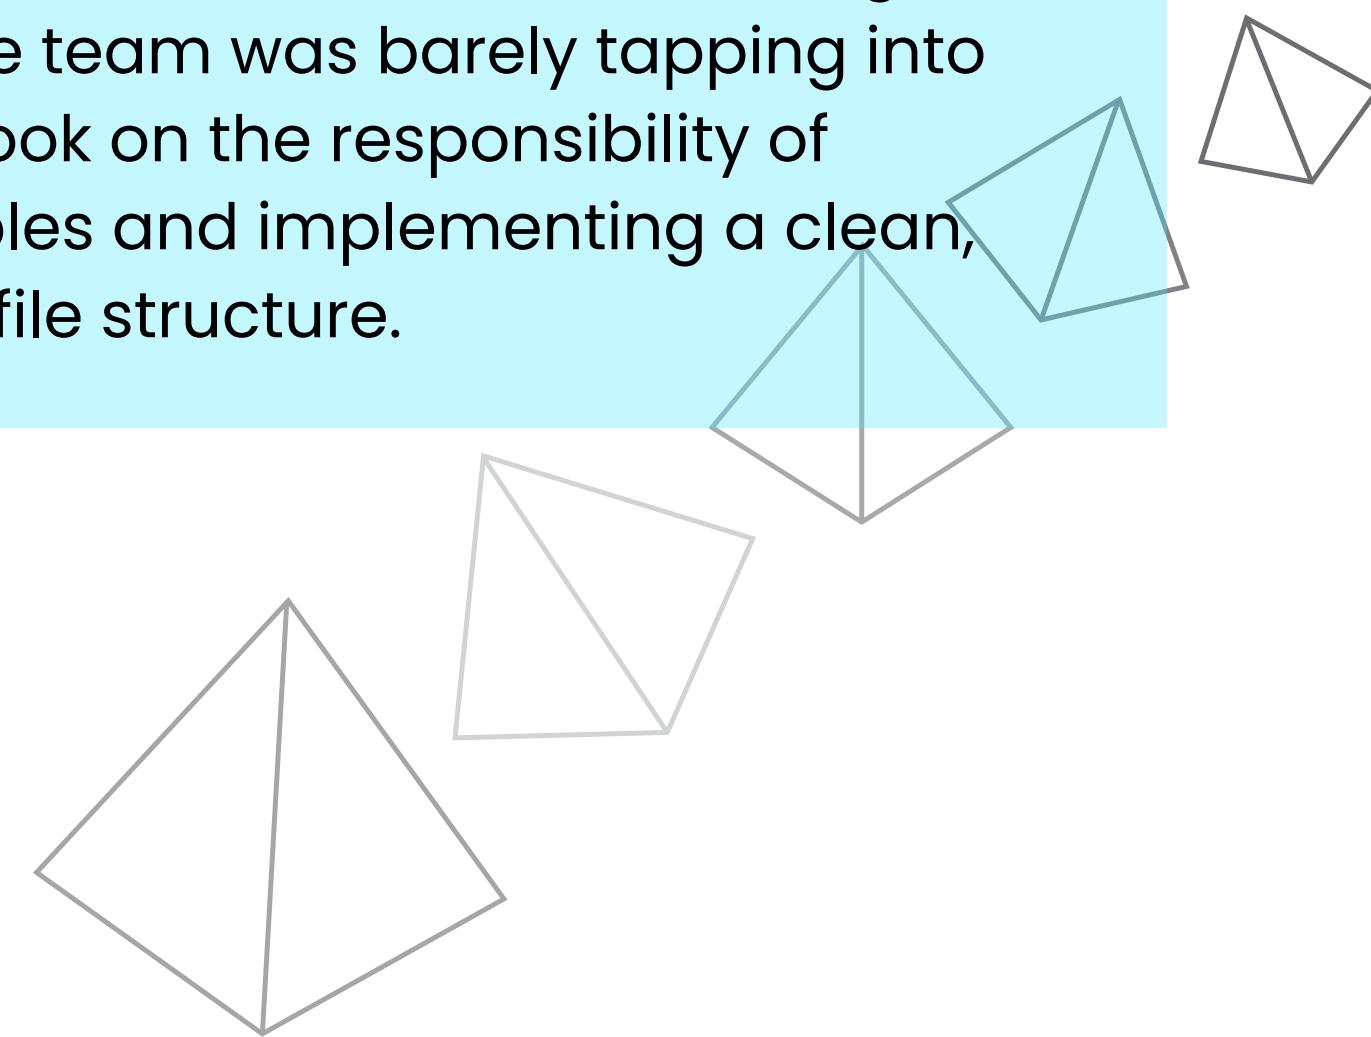

In Angular, devs have the ability to utilize Sass, which adds variables, nesting, inheritance, and other helpful features that make CSS more robust and ultimately reduce the time it takes to apply styles.

When I started, the environment was configured for Sass, but the team was barely tapping into its potential. I took on the responsibility of creating variables and implementing a clean, standard Sass file structure.

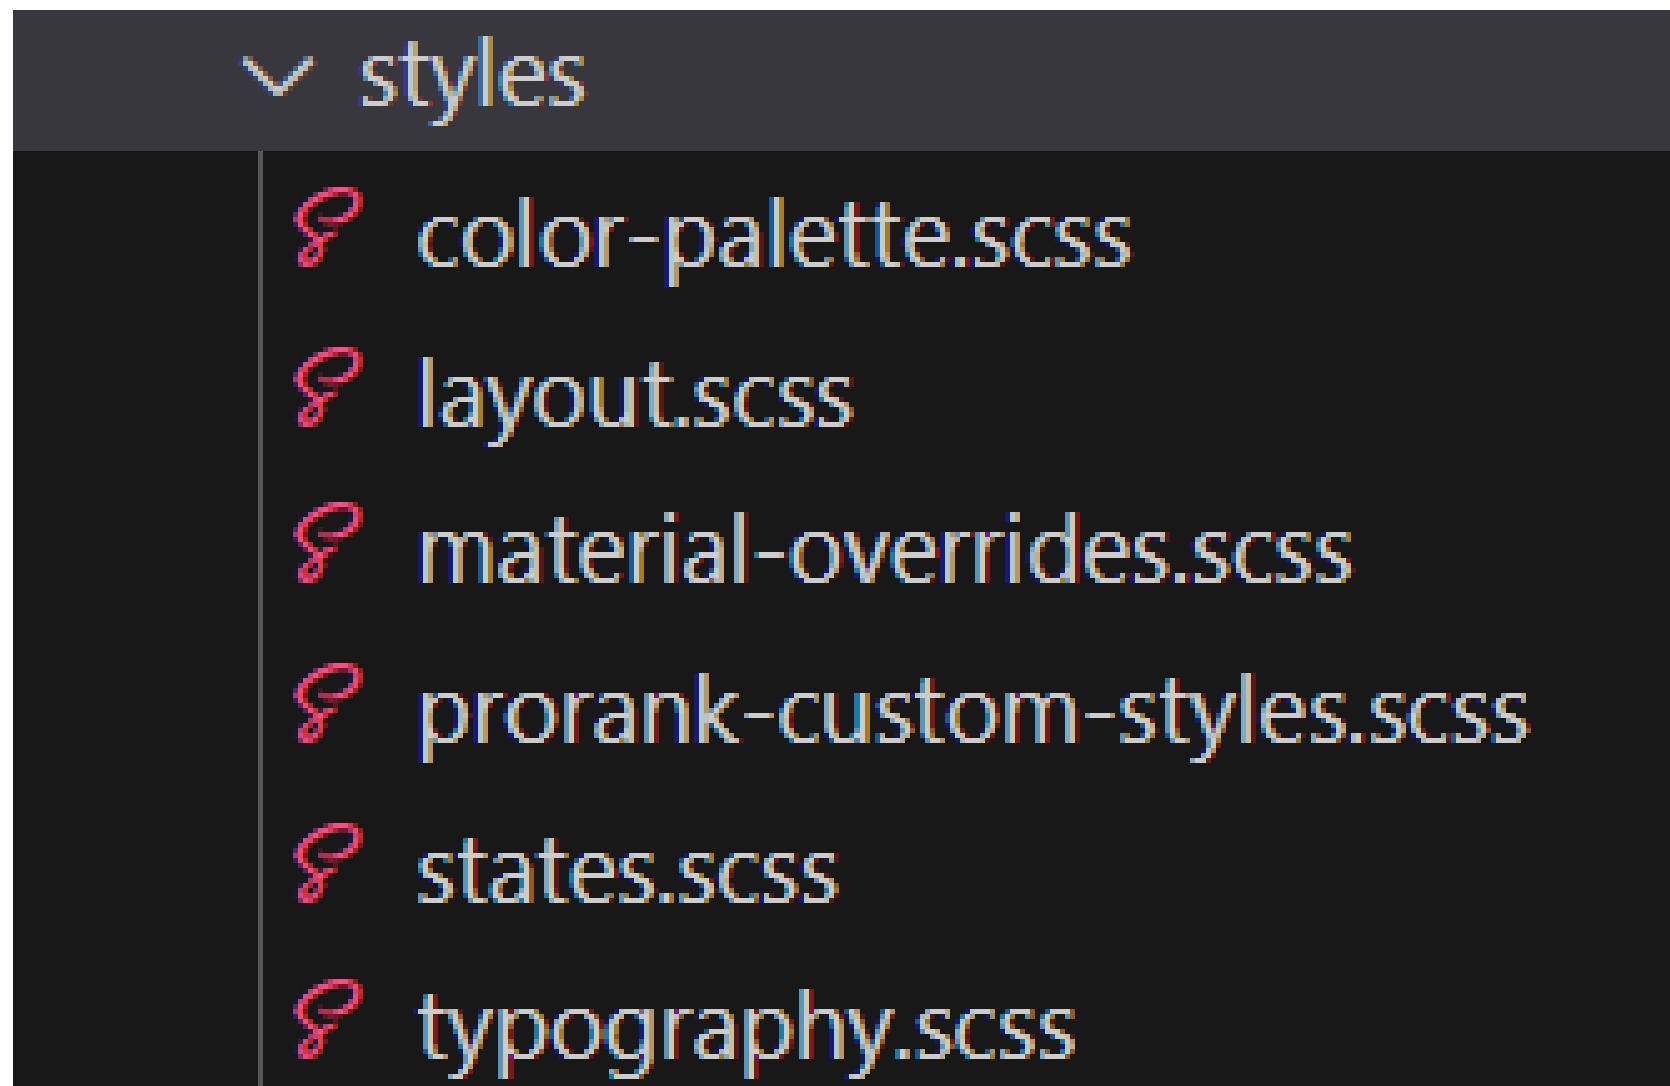

“

Sass enables developers to write cleaner, more efficient code.

KASUN WEERASINGHE, FRONT-END DEVELOPER & MEDIUM AUTHOR

code quality // organizing styles

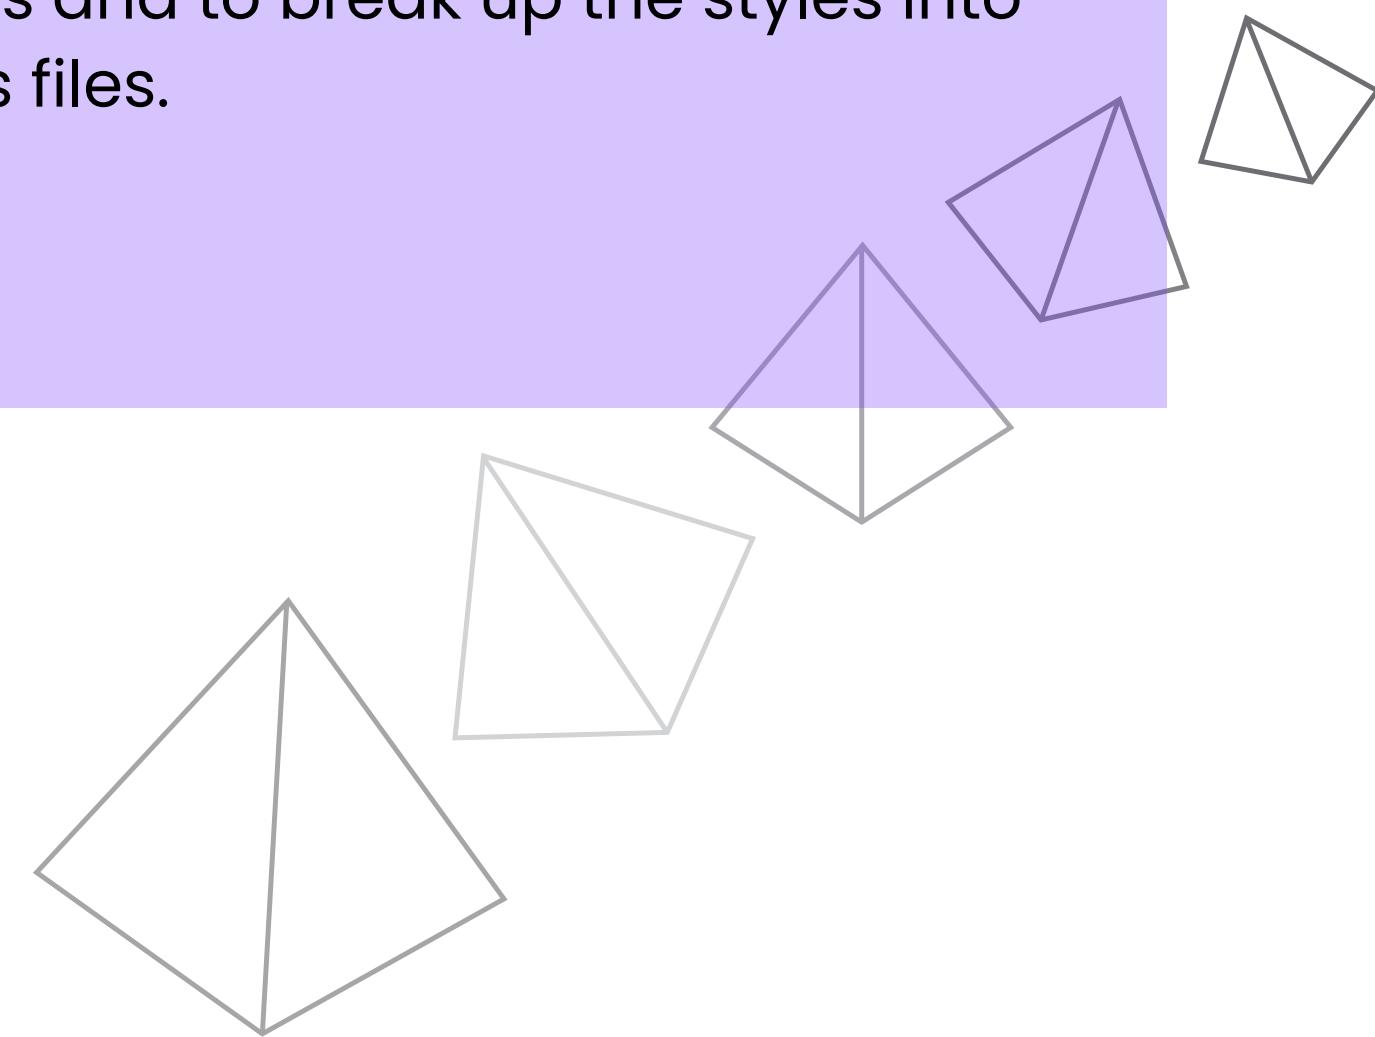

When I started, all global styles were dumped into `styles.scss`.

`styles.scss` was very cluttered and difficult to follow; therefore, it was a necessity for the sake of developer efficiency to remove unused styles and to break up the styles into multiple scss files.

“ —

One of the SASS best practices is the ability to divide your styling into separate files without compromising on performance.

EVNE DEVELOPERS

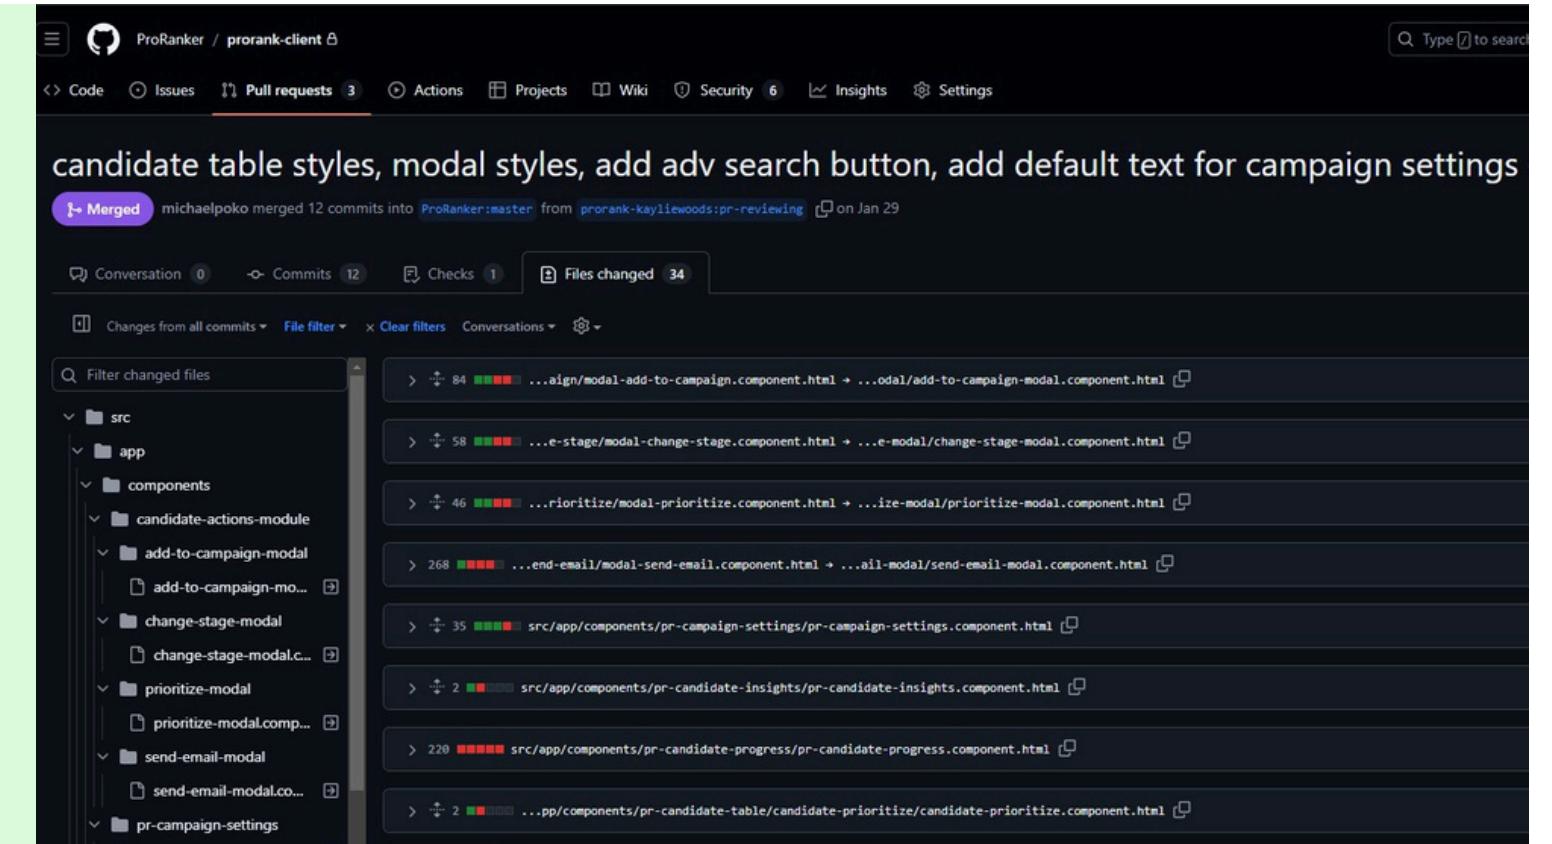

code quality // condensing markup & styles

Minimizing the amount of code needed to accomplish the product's goals is an essential part of my development process.

In the past year, I removed approximately 309 lines of unused or unnecessary CSS application-wide, replacing with simplified classes or classes we already had access to via Bootstrap.

This also applies to HTML & TS. When I fine-tuned the CTA modals (*see screenshot*), I was able to shrink the necessary markup by 126 lines.

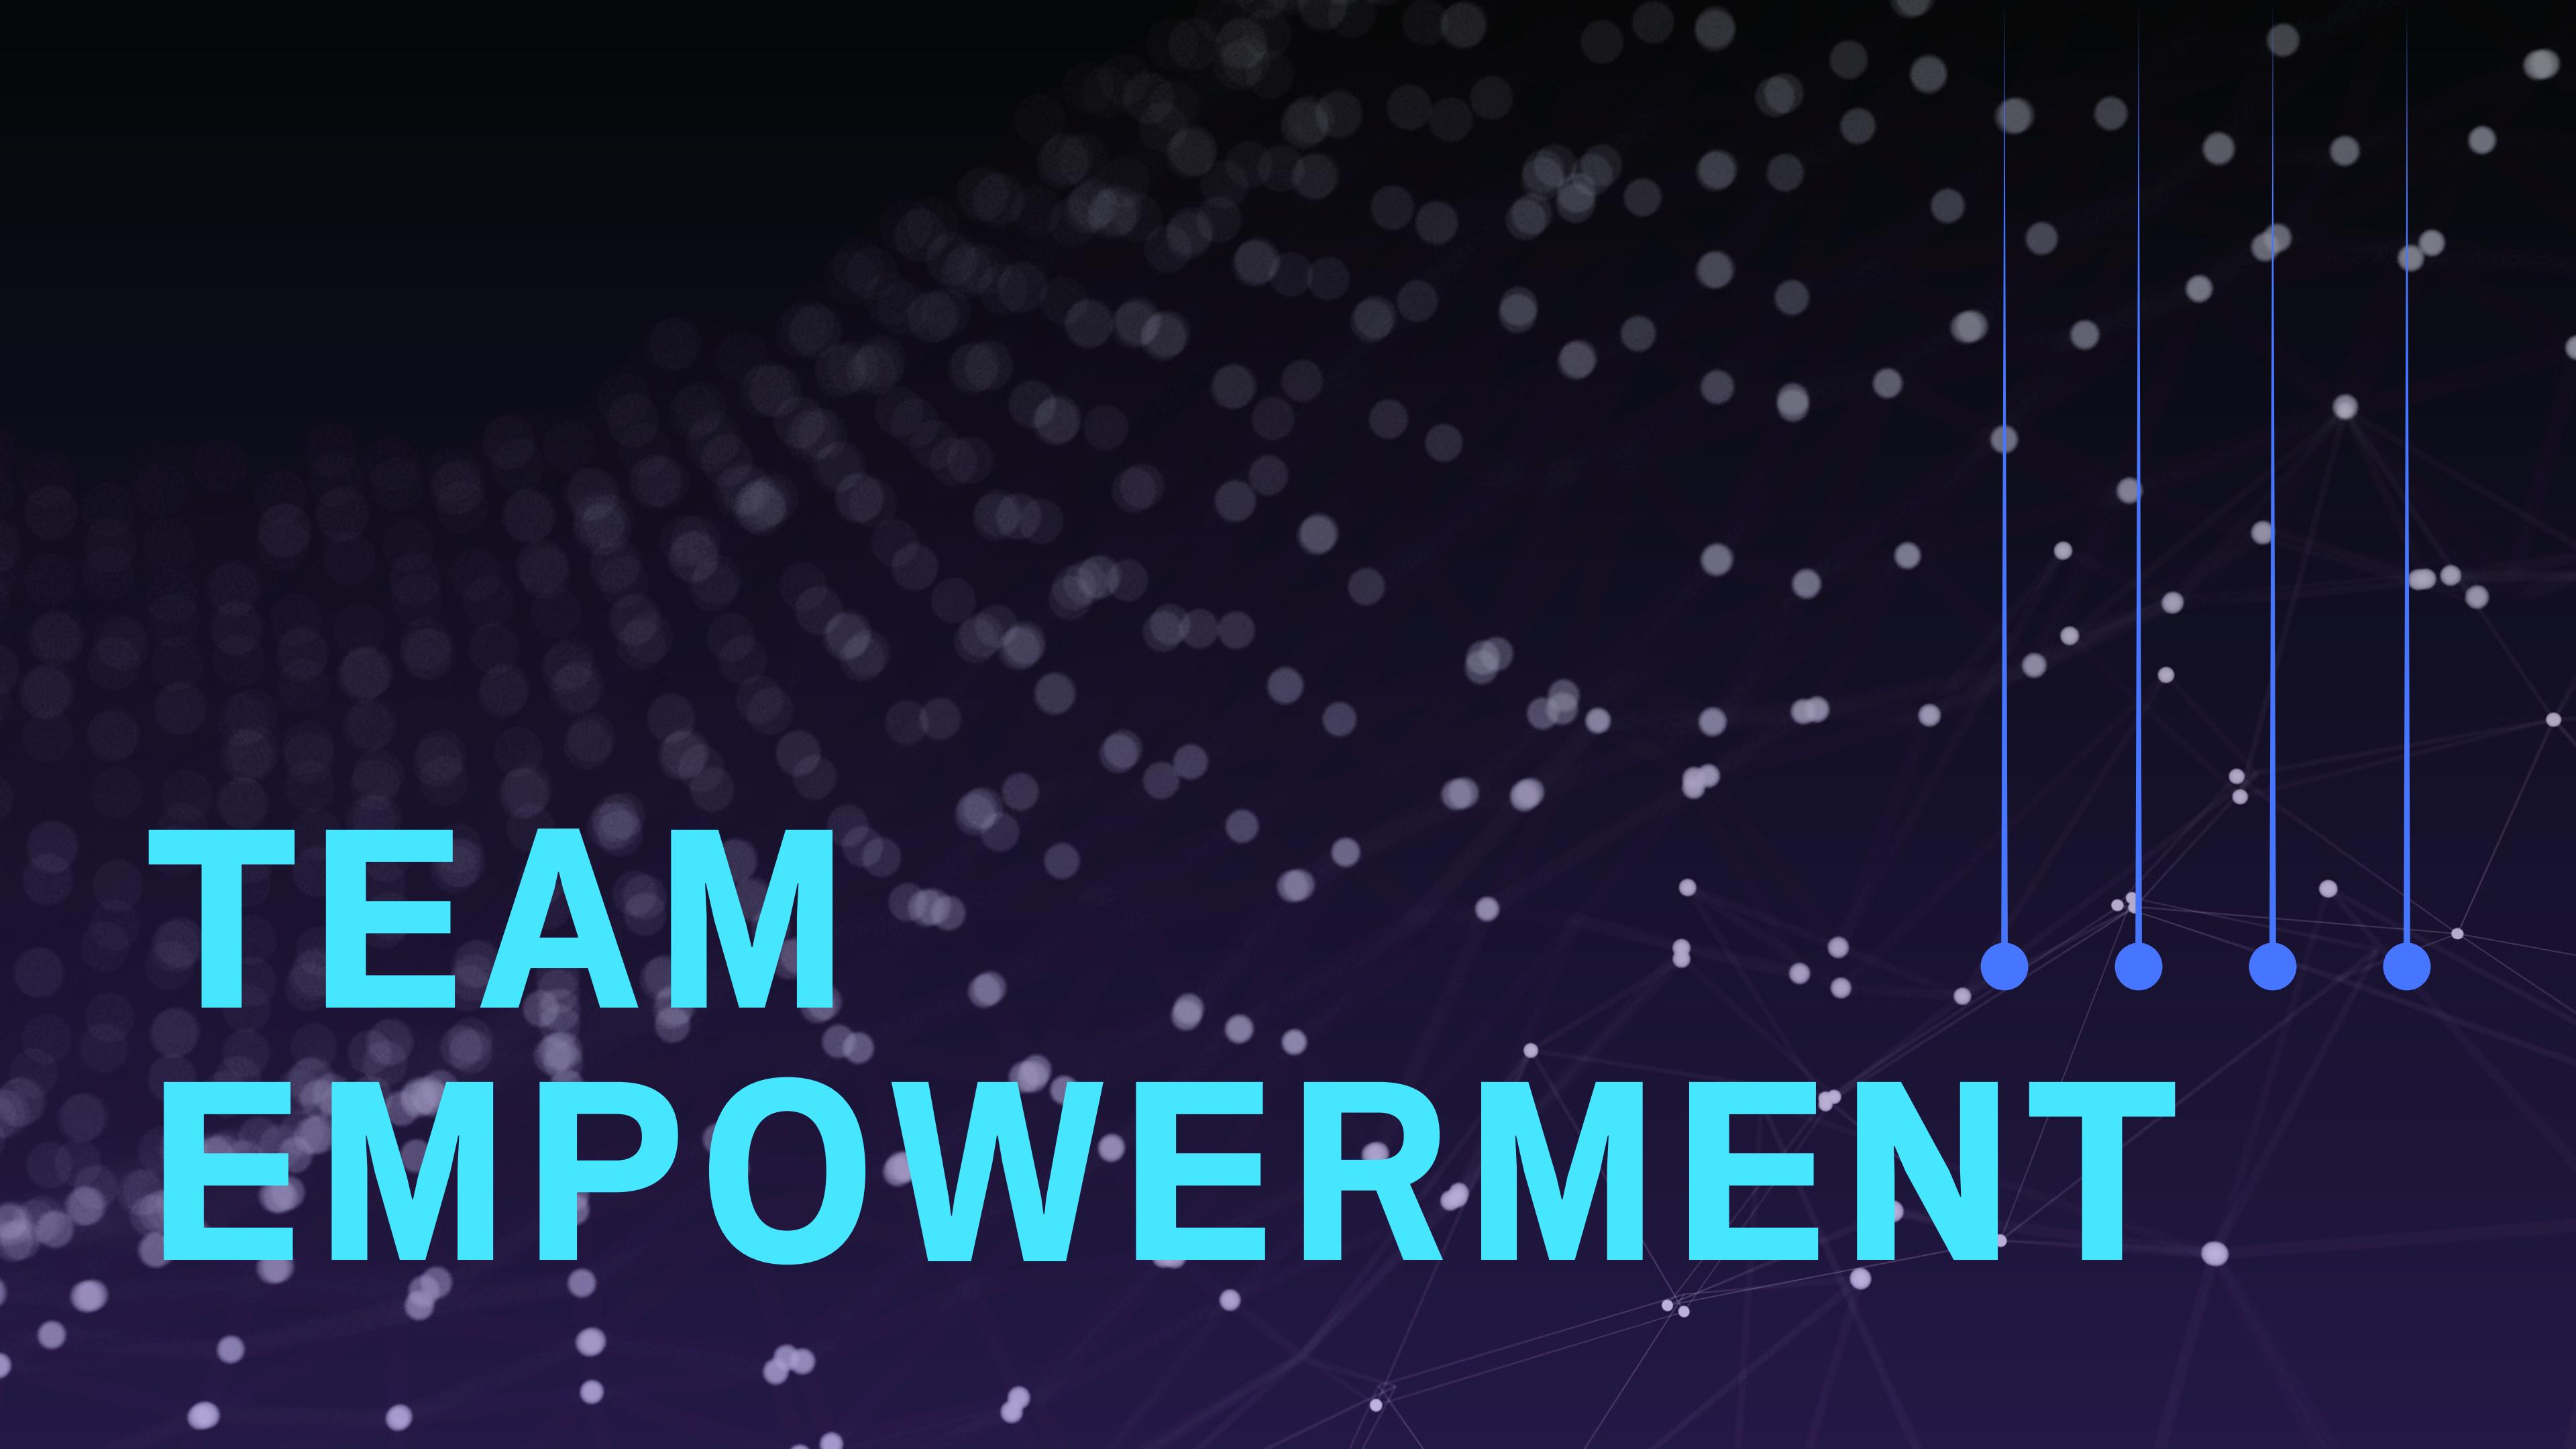

“

A smaller codebase is inherently easier to read and understand. When there are fewer lines of code, developers spend less time deciphering what each piece does and more time making meaningful improvements or fixing bugs. This leads to reduced maintenance costs over the long run.

ADABEAT IT CONSULTANTS

TEAM EMPOWERMENT

documentation & notes

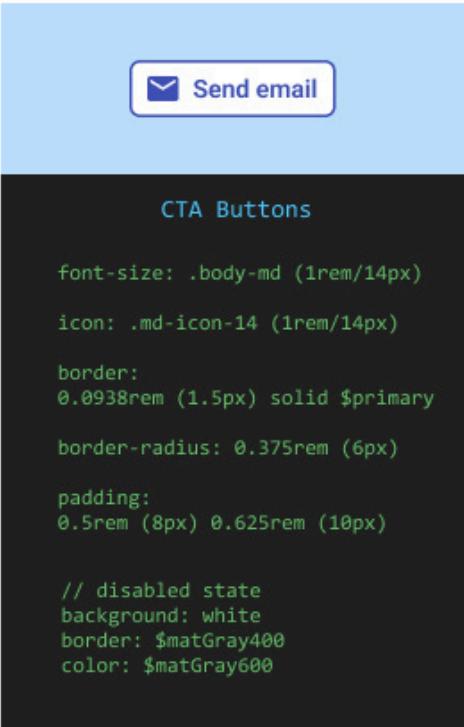

As the team grew and the product became increasingly complex, proper documentation and notes became an absolute necessity.

I took initiative and started creating various documents, designs, Miro boards, and more for the whole team to have access to.

QUOTES FROM MY PEERS

“

Kaylie is doing a great job. She is talented, hardworking and skilled. She's always willing to help, and her positive attitude makes her a joy to work with. I really learned a lot of CSS tricks from her and her comments and reviews on my PRs helped me a lot to improve my work and deliver high-quality code.

— **Valeriya Askar**, Full-Stack Developer

“

I had the pleasure of working with Kaylie this summer. It was amazing to get to know her and see her lead large scale, high-impact projects.

Kaylie is a unique blend of skilled technologist, mastering code and front end complexity blended with a high bar for aesthetics and visual design. She is always a champion for the user and brings their voice and perspective to the team and in key decisions.

“

Kaylie was a huge help when I joined the team. She quickly got me up to speed on our project with her excellent frontend and UI/UX design skills. She was always there to tackle any questions or issues that popped up, ensuring the environment was friendly and open. This really made it comfortable to ask questions and just be myself. Her blend of technical skills and supportive presence is truly appreciated!

— **Dennis Pylypenko**, Angular Developer

”

In addition to bringing a multifaceted approach to building products, she was also able to help scale the team at ProRank, hiring and onboarding new team members and enabling their success.

Her work ethic and attention to detail is unmatched. She is a force multiplier and I can't wait to see what comes next for her and ProRank!

— **Valerie Downs**, UX Consultant & Mentor
